VETAPALEM VENKATA NARENDRA KUMAR

JAVA / SPRING BOOT BACKEND ENGINEER
Hyderabad, Telangana 500016, India
+91 6304095526 | vnarendrakumar.work@gmail.com | LinkedIn | GitHub

PROFILE

Java / Spring Boot backend engineer with 3+ years at Teksystems Global Services (promoted twice), building REST APIs and microservices with Spring Security (JWT), Hibernate/JPA and Oracle SQL. Worked with Kafka and Redis in the team's setup and went deeper by building and deploying MedInfo, a 6-service platform with Docker and Gemini API.

TECHNICAL SKILLS

Languages & Databases: Java | SQL | Python | JavaScript | Oracle | PostgreSQL | MySQL

Backend: Spring Boot | Spring Framework | Spring Security | Spring Data JPA | Hibernate | REST APIs

Microservices & Messaging: Spring Cloud Gateway | Eureka | Config Server | Kafka | Redis

DevOps & Testing: Git | Maven | Jenkins | GitHub Actions | Docker | Linux | JUnit 5 | Mockito | JaCoCo

AI (personal project): Google Gemini API | Apache PDFBox

PROFESSIONAL EXPERIENCE

Teksystems Global Services — Oct 2023 – Present *Hyderabad*
Software Engineer

- Built Spring Boot REST APIs for the Reservation and Rewards modules of the Hotel Reservation & Front-Desk Management System, using Hibernate/JPA on Oracle, with validation, DTO mapping and exception handling.
- Helped migrate a legacy Jersey/Java EE application to Spring Boot microservices.
- Secured the APIs with JWT authentication and role-based authorization.
- Tuned Oracle SQL queries flagged in production analysis, and debugged issues with SQL Developer and Splunk.
- Wrote unit and integration tests (JUnit, Mockito); joined code reviews, Jenkins builds, releases and issue resolution.
- Worked on Kafka event processing, Redis caching and Docker containerisation in the team's microservices.

PROJECTS

MedInfo – Emergency Medical Information Platform (Personal Project) **Live:** medinfo.org.in
Java 21, Spring Boot 3.5, Spring Cloud, Kafka, Redis, PostgreSQL, Docker, GitHub Actions, Gemini API

- Built a 6-service Spring Boot system (Auth, Medical, Audit, Gateway, Eureka, Config) with a database per service.
- Added stateless JWT auth and email verification (hashed one-time tokens, 24-hour expiry); the public emergency page uses a random UUID, not a database ID.
- Built a Kafka audit pipeline (3 retries, Dead Letter Topic, idempotent consumers on a unique event ID) and a Redis cache-aside layer (10-minute TTL, evicted on profile or summary change).
- Built an AI report pipeline: Kafka processes uploads in the background, Gemini builds a summary and timeline, and events without a matching quote and date are dropped (unit tested).
- Containerised all services with Docker Compose and deployed on a Contabo VPS behind Caddy HTTPS (only the gateway exposed); GitHub Actions runs unit tests on every pull request.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering **Graduated: 2023**
Malla Reddy College of Engineering and Technology *Hyderabad, Telangana, India | CGPA: 8.46/10*

ACHIEVEMENTS

SPOT Award (twice): May 2024 and June 2026, for technical contributions and delivery.

Technical Training: Ran a 4-day React workshop for 200+ students.
